

Acknowledgment

I/We wish to express our sincere gratitude to our External guide, Mr. Mayank Patel, for continuously guiding me at the company and answering all my doubts with patience. And I would like to thank our internal guide mam **Mrs. Riya Macwan**.

We also thank our parents, friends, and all the members of the family for their precious support and encouragement which they provided in the completion of our work. In addition to that, we would also like to mention the company personnel who gave us permission to use and experience the valuable resources required for the internship.

Thus, In conclusion to the above said, we once again thank the staff members of **Unnati Informatics** for their valuable support in the completion of the project.

Thank You

Panchal jigar

ABSTRACT

Bug tracking is the system that enables to detect the bugs. It does not detect the bugs but provides the complete information related to bugs detected. The project manager will create a team of developers and tester. The testing team will create bugs and assign them to the developer. The developer will start fixing the bug and report it as a fix(resolution). after that tester test the bugs and approve and clean the bug from the report.

Bug information includes bugs id, bug name, bug status, project name, and bug type.

In this way, the entire process will be executed which will help to achieve the quality of the project. And project success rate can be increased.
