CHAPTER 8: CONCLUSION & DISCUSSION

8.1 OVERALL ANALYSIS OF INTERNSHIP

The exciting journey of learning and tinkering is never complete without proper work experience. Internships are such an opportunity that give your hard-earned degrees afinal touch. They make our learning complete and consistent with professional and industrial exposure.

One of the advantages of such a learning model is that it is an effective alternative to gaining the required experience without committing yourself to full-time. An internshipgives you a live experience of the IT industry. We can see how all the work is going inthe IT world. Because college level and a company level are different. An internship gives me industry-level experience and it is the main benefit of my career.

In my point of view, this internship gives me the first step to starting my journeyin the IT corporate world and taught me a lot of things.

8.3 PROBLEMS ENCOUNTERED AND POSSIBLE SOLUTIONS

There were many problems I faced like some errors in the HTML file and solutions that can be found on the internet. While developing I faced oneproblem how to add drag and drop functionality to the home page. There was an error like this but after reading blogs on the internet somehow it was solved.

Some Problems occurred during making the responsible design in the company's project but by meeting with a co-worker it was solved.

8.4 SUMMARY OF INTERNSHIP

I began my internship with UNNATI INFORMATICS IND LTD on 1st January 2022 and

had the absolute pleasure to be included as a member of their team. The employees were immensely friendly, supporting, customer-service oriented, caring, and honest.

My fourteen-week stay with UNNATI INFORMATICS was more than a simple internship. it was an opportunity for me to prove myself as a reputable employee, a reliable coworker, and a motivated student. It was also an opportunity to gain the critical office experience I had not received through my past work experience.

One of the most valuable skills. versatility is developed. In smaller companies, it is common to work across various departments and that was exactly what I did. Throughout my internship, I worked in the IT departments and had the incredible opportunity to work as a controller through the IT conversion. I attended quarterly, met all of my coworkers, and had the opportunity to share projects with coworkers across the other branches.

8.5 LIMITATION & FUTURE ENHANCEMENT

As all things are going digital and it has many benefits. This makes one move toward digital India. so, this is also a Web application that will be used by companies. This will also help them for managing things and stuff. This tracking project will helpthem in managing their projects, bugs, etc.

In future Enhancement, more modules will be added according to the requirements coming while using this web application. More reliable algorithms could be implemented in the future that gives precise information about projects and suggests them a meaningful solution. Andmore functionality will be added which helps them to work managing things easily.
